ACKNOWLEDGEMENTS

I am very grateful to the Almighty God for giving me strength to go through this demanding but rewarding exercise. The completion of this study was realized through the will of God and contribution plus support of many people. Special thanks go to my 1st supervisor Mr Joseph Munyao, and my 2nd supervisor Dr Samuel Muriithi, who patiently and selflessly guided me throughout the entire process despite the normal academic hurdles. I thank and appreciate the management and employees of Hellofood Kenya for giving me the necessary support needed to conduct the research study with special thanks especially to those who actively participated in giving their opinions by responding to the questionnaires in spite of their busy schedules, without which the study would not have been duly finalized in due time. I’m thankful to my parents for their support and understanding throughout the research and academic journey. Above all, to God be the glory for making this thesis possible.

ABSTRACT

The study aimed to find out the effect of mobile marketing on business competitive advantage with a case study of Hellofood Kenya. The objectives that guided the study were to identify the types of mobile marketing channels, to find out level of awareness of mobile marketing adoption, to determine the relationship between mobile marketing and business competitive advantage and to establish the level of awareness of challenges faced by Hellofood as they use mobile marketing. The theory used is the technology acceptance model which assigned a considerable weight to two key determinants which include perceived usefulness: the degree to which a person believes that using a particular system would enhance his or her job performance and perceived ease-of-use: the degree to which a person believes that using a particular system would be free of effort. Perceived usefulness and ease-of-use from user’s attitude towards technology leads to the intention to use a technology. The study applied a descriptive research design. The target population consisted of all employees in the organization and data collection was done through questionnaires. Some of the key findings were that the most commonly used mobile marketing channels were text messaging, mobile apps and mobile email; there was a high level of awareness of mobile marketing adoption; there was a low level of awareness of challenges faced by using mobile marketing and the preferred mobile platform of use in the organization was android. Some of the key recommendations were that the management do market research so that they can identify the most important mobile marketing channels at the same time spend resources in building a customer base along mobile consumers.
DEDICATION

I dedicate this research thesis to my dear parents who encouraged and supported me while undertaking my studies at Daystar University.
